FOR COOPERATIVE HOUSING SOCIETIES

WATER TANKS MONITOR SYSTEM

Every drop counts.

Save precious water, and electricity.

Live tank levels on every phone, so tanks stop overflowing and running dry, the motor runs only as long as needed, and the committee gets clear reports.

The water worries every society knows

Tanks overflow
Water, and the electricity that pumped it, go down the drain.

Tanks run dry
Residents find out when the taps stop.

Climbing to check
Someone goes up to the roof or opens the sump.

Motor left on
Nobody knows how long it ran.

Hidden leaks
A slow loss at night goes unnoticed for weeks.

No numbers
The committee has complaints, not data.

Save precious water, and the electricity that pumps it

Precious water
- ✓ See the level before a tank overflows
- ✓ The night leak check flags hidden losses early
- ✓ Daily use per tank, so waste stands out

Electricity
- ✓ Every overflow also wastes the power that pumped it up
- ✓ See when a tank is nearly full, and switch the motor off on time
- ✓ Every motor run and its minutes are recorded

WATER TANKS MONITOR SYSTEM

How it works

Sensor
Above the water in each tank or compartment.

→

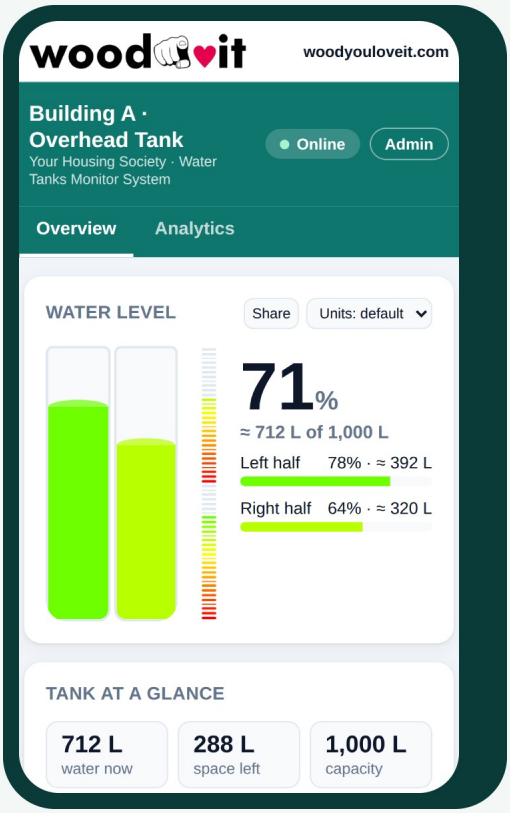

Controller
Works out level and litres; keeps months of history.

→

Level bar
Colour LED bar where people pass.

→

Phones
Live in the app or a browser.

Features

- **Live level and litres** for every tank and compartment
- **Alerts** for low water, sensor faults and filling
- **Night leak check** flags a level that drops unused
- **Motor run time** and every fill, per day
- **Water used per day** and the busiest hour
- **Reports** PDF, data export, WhatsApp sharing
- **Self-healing** with a built-in sensor test
- **Updates over Wi-Fi** no site visit needed
- **Your data stays with you** no cloud account

From survey to savings

1
Site survey
Tanks, sumps, power and Wi-Fi.

2
Installation
Tanks stay in use; no emptying.

3
Set-up and training
For the committee, in one session.

4
Support
Updates and service visits.
